

# Shelter Animal Outcomes

# THE PROJECT

The goal of the project is to build a classifier which will correctly predict the outcome for a shelter animal based on select characteristics of animals.

The problem is a multi-class classification with the labels being: “Adoption”, “Return to owner” , “Transfer”, “Euthanasia”, and “Died”

# OUR PROCESS

## DATA CLEANING

We cleaned the data from Austin Animal Center

## MODELING

We built a few multi-classification models

02

03

04

## EDA

We performed Exploratory Data Analysis to understand dependencies

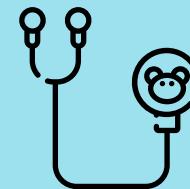

## GIT

We broke Git a few times

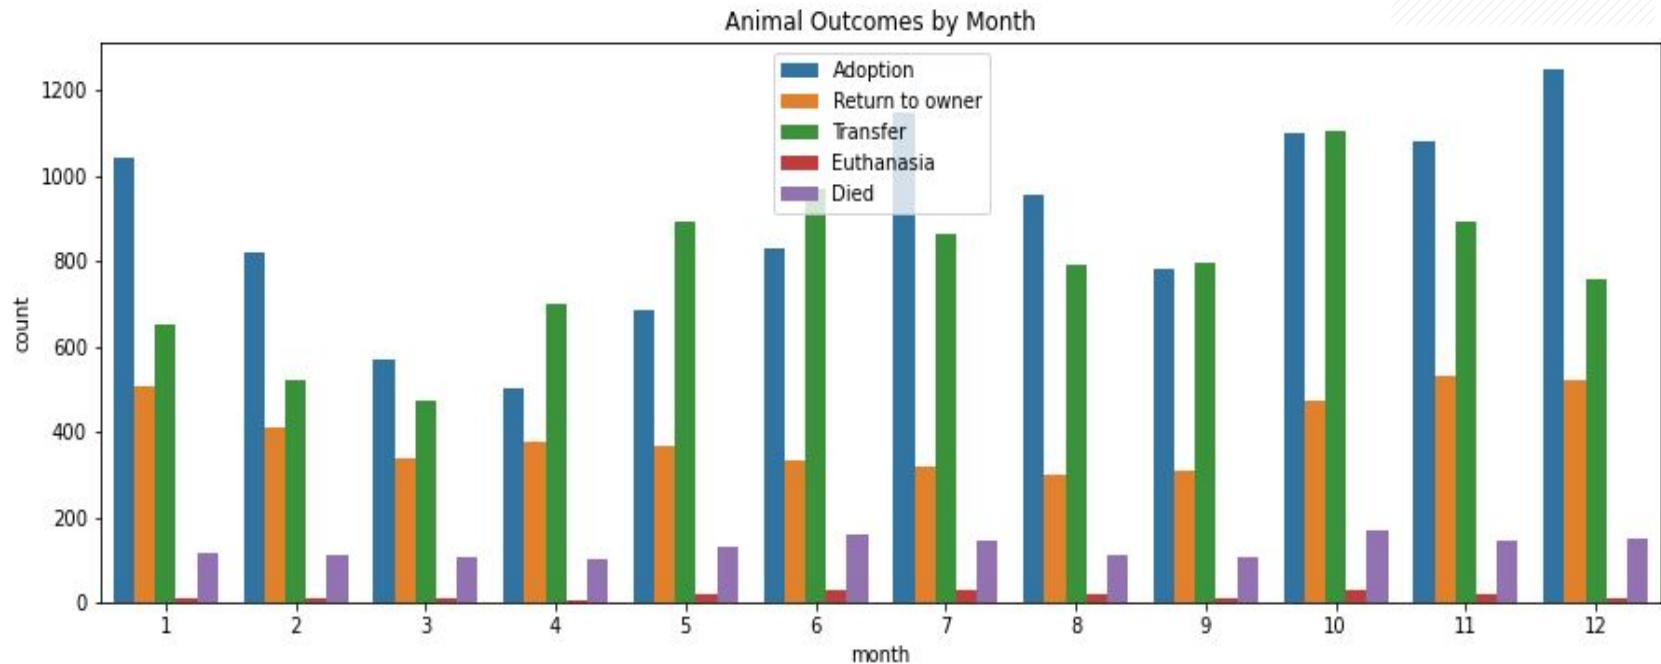

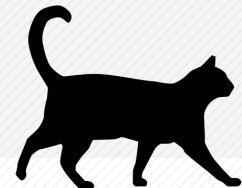

“Modeling is easy. Git is HARD”
